

# Sweet Key

Close-Up: Spring 2005

Sweet Spot Solutions, a Mesa, Ariz.-based company aims to revolutionize the Wi-Fi security market head-on with its Internet Key, a security device for protecting wireless networks. The Internet Key is used in conjunction with a controller that is placed into your existing network controller that is placed into your existing network that puts a “gate” around your wired and/or wireless network. The only way to access the network is to insert the Internet Key into the USB port of a laptop or computer. The authentication process takes place in a few seconds, and the user is then granted access to the network. Without the Internet Key, users cannot log on to the network—offering a simple and secure way to manage who has access. The Internet Key has hardened credentials and a two-factor authentication.
